

Portfolio Objective

The objective of this portfolio is to achieve a steady rate of capital growth, combined with volatility and risk which are both below average. The portfolio will invest in bonds issued by governments as well as companies, and will also utilise index linked securities. Income will be generated from these investments, but obtaining a high overall yield will not be a prime consideration. There will be exposure to alternatives such as commercial property and Absolute Return Funds, as well as fairly low levels of investment into equity based funds. The model portfolio will look to invest mostly in passive investments to achieve the above objectives. This portfolio follows an **Internal risk profile** with a very low (i.e. 2 out of 10) attitude to investment risk. The Manager aims to achieve the objectives over a 5 year period.

Commentary

It's been a very strong quarter for equities and credit as central banks and governments provided enormous amounts of stimulus and economies started to reopen. Despite the strong rebound in risk assets, traditional portfolio hedges such as government bonds and gold have held up well. US Treasuries are up about 9% year to date, while gold is up close to 18%.

As economies have started to reopen, economic data has shown signs of a sharp rebound. For example, US retail sales rose 1.7% month on month in May, while UK retail sales rebounded by 12%. While sales are still down 6% and 13% year on year respectively, the speed and magnitude of the bounce back is a clear positive. The other positive is that central banks globally have made clear that they stand willing to use their full firepower to keep government and corporate borrowing costs low.

The end of June is clearly the half way mark for the year and what strikes me most is how mediocre the UK stock market has been compared to most other major markets. The reason is primarily the makeup of the UK market, industry sector wise there are very few offsets for the; Oils, Banks, Travel, Property, Auto's, Transport, Telecoms, Aerospace and so on which are all down between 20 and 50% this year. Only two sectors are up meaningfully, Leisure Goods and Tech' Hardware, and these two sectors combined make up less than 5% of the index and Brexit and the accompanying UK-EU trade deal hasn't really been on the radar yet.

Overall, the market has rallied on the back of fiscal and monetary stimulus, combined with the reopening of economies. We believe the monetary support is here to stay, but that in some countries there is a risk that fiscal stimulus may become less generous.

Portfolio Information

Launch Date:	01 March 2015	Net yield***:	1.91%
Dealing Frequency:	Daily	No. of holdings:	14

The past performance of an investment is not a reliable indicator of future results. The value of investments and any income from them may fluctuate and are not guaranteed. The value of your investments represents the cumulative effect of all of the underlying investments and can fall as well as rise. Performance is calculated on a daily basis and the portfolios are rebalanced on a quarterly basis, at the beginning of; March, June, September and December. This reflects the asset allocation at the beginning of the month, although it can take up to 5 business days for changes to be incorporated. Total return, gross of platform and Brown Shipley Fees but net of individual fund management fees.

Investment Risks - The model portfolio balances equity investment risk with exposure to Sovereign and Corporate bonds. Exposure is gained through investment in other funds whose individual risk profile may not match that of the model portfolio. Exposure to UK and international markets is through collective funds. Bonds are affected by the relative movements in interest rates, and the risk of default by the sovereign or corporate issuer. Global currency fluctuations contribute to fluctuations in the value of the investment.
