

SVS BROWN SHIPLEY BALANCED FUND

Factsheet to 31 August 2025

Fund Objective

The Fund aims to achieve growth through a combination of capital and income over the medium term (at least five years). The Fund will invest, directly and indirectly, in a mixture of shares and fixed interest securities (being sovereign, investment grade and non-investment grade bonds). The allocation between the shares and fixed interest securities in which the Fund invests will be actively managed and will vary in response to short term market conditions. However, the Fund operates a balanced strategy, maintaining a balance between shares and fixed interest securities, with the allocation to shares remaining within a 40% to 85% range. The Fund excludes issuers that derive more than 10% of revenue from thermal coal extraction or power generation, those that are involved in controversial weapons, issuers subject to EU arms embargoes and those that are deemed in violation of the UN Global Compact principles for over 3 years. In addition, the Fund integrates environmental, social and governance (ESG) factors in its investment process.

Commentary

A positive July for risk assets was followed by good returns for most asset classes in August. Broad based measures of both equity and bond markets ended the month in positive territory as a combination of well received company reports and supportive macroeconomic data led to gains. A strong second quarter earnings season helped investor sentiment whilst the prospect of a more dovish US Federal Reserve following weaker than expected jobs data in the region supported markets.

Equity markets were led by Japanese stocks following the US-Japan trade deal announced at the end of July as well as being supported by positive economic data for the second quarter. UK stocks lagged, however, with gains held back by higher than expected inflation data for July.

Fixed income markets were mostly positive over the month with higher risk sectors and regions outperforming their lower risk counterparts. Expectations for more interest rate cuts in the US helped sentiment, leading to gains in particular in Emerging Market debt and high yield bonds. Corporate debt also performed well. Sovereign debt was mixed with US treasuries posting gains over the month whilst European and UK government bonds both lagged – the latter struggling on the back of the afore-mentioned higher inflation print.

Over the month we made some changes to the direct equity holdings in the portfolio. We added RELX to the portfolio given the attractive valuation of the stock whilst also increasing the Berkshire Hathaway holding following a period of underperformance in the shares.

Past performance is not a guide to future performance. The value of your investments represents the cumulative effect of all of the underlying investments and can fall as well as rise. The value of an investment or any income received from it, is not guaranteed and you may not get back some or all of the amount invested. Investors should seek tax advice to understand their personal liability for investment income and/or gains. This will depend on their personal circumstances and the prevailing tax rules, which are subject to change. Please refer to the Key Investor Information Document and the fund prospectus for further fund information.

*Net Historic Yield on current portfolio constituents, net of fees as at 31/08/2025. Fees taken 50% from income and 50% from capital.

†The ongoing charges figure is based on the last year's expenses (ending 29/02/2024) and may vary from year to year. The transaction fee is paid by the fund due to the acquisition and disposal of investments.

Investment Risks - This fund predominately gains exposure to a combination of income and capital growth assets through investment in other investment funds whose individual risk profile may not match that of the Balanced fund, while exposure to UK markets is generally through direct equity holdings. Global currency fluctuations contribute to fluctuations in the value of the investment. Investment Trusts, Sovereign Bonds and Structured Products do not represent significant holdings but where used carry specific investment risks; with structured products there is a risk of insolvency of the underlying issuer, while Investment Trusts may borrow to invest and, where borrowing is used, the gains or losses in those underlying investments are exaggerated. The value of bonds are affected by relative movements in interest rates. Please refer to the Key Investor Information Document and the fund prospectus for further fund information.

Distribution and Fund Administration

This document is provided to investors for the purpose of information only. It is not for onward distribution to any other type of client. The views, opinions and forecasts are those of the fund manager. This material should not be relied upon as sufficient information to support an investment decision. This material is for information only and does not constitute an offer or solicitation of an order to buy or sell any securities or other financial instruments, or to provide investment advice or services. The dealing price may include a dilution levy where the fund experiences large inflows and outflows of investments. Further details are available in the Prospectus.

Portfolio positions are based on gross asset valuations at global close (not official NAV time). Historic yields distributions declared over the past 12 months.
