

SVS BROWN SHIPLEY BALANCED FUND

Factsheet to 31 August 2026

Fund Objective

The Fund aims to achieve growth through a combination of capital and income over the medium term (at least five years). The Fund will invest, directly and indirectly, in a mixture of shares and fixed interest securities (being sovereign, investment grade and non-investment grade bonds). The allocation between the shares and fixed interest securities in which the Fund invests will be actively managed and will vary in response to short term market conditions. However, the Fund operates a balanced strategy, maintaining a balance between shares and fixed interest securities, with the allocation to shares remaining within a 40% to 85% range. The Fund excludes issuers that derive more than 10% of revenue from thermal coal extraction or power generation, those that are involved in controversial weapons, issuers subject to EU arms embargoes and those that are deemed in violation of the UN Global Compact principles for over 3 years. In addition, the Fund integrates environmental, social and governance (ESG) factors in its investment process.

Commentary

August was a positive month for global equity markets, supported by resilient economic growth, encouraging corporate earnings and continued investment in artificial intelligence-related technologies.

The US market produced strong returns as economic data remained supportive and earnings generally exceeded expectations. Japanese equities also performed well, benefiting from corporate governance reforms and improving profitability. European markets advanced on steady economic activity and resilient company results, while UK equities delivered more modest gains. South Korea was the standout performer, with semiconductor companies benefiting from strong AI-related demand and improving export trends.

Bond market returns were mixed in August. UK gilts delivered modest positive returns as easing inflation pressures and a relatively stable domestic political backdrop supported investor sentiment. US Treasuries also generated small gains, while European government bonds weakened as markets continued to price in further ECB policy tightening. Japanese bonds were the weakest

performers as yields rose sharply. Credit markets were more supportive, with investment grade, high yield and emerging market debt all delivering positive returns.

Over the month, we made several changes to the direct equity holdings within the portfolio. New positions were added in HSBC, Micron and Nestlé to increase diversification across the Financials, Technology and Consumer Staples sectors. These additions were funded through reductions to Allianz, Merck, Siemens, Procter & Gamble and Unilever. The changes are intended to enhance portfolio resilience, improve sector balance and capture long-term quality opportunities.

We maintain a moderate risk stance, with a tactical preference for equities over bonds. Within equities, we continue to favour the US and emerging markets. This positioning reflects our expectation of continued global economic growth, supported by ongoing investment in artificial intelligence, alongside positive spillover effects for infrastructure and defence-related spending.

The Investment Association sector is used in the above graph for comparative purposes only. This comparator benchmark has been chosen as it best reflects the asset allocation of the Fund and as it provides a direct peer group comparator for SVS Brown Shipley Balanced A Acc.

Past performance is not a guide to future performance. The value of your investments represents the cumulative effect of all of the underlying investments and can fall as well as rise. The value of an investment or any income received from it, is not guaranteed and you may not get back some or all of the amount invested. Investors should seek tax advice to understand their personal liability for investment income and/or gains. This will depend on their personal circumstances and the prevailing tax rules, which are subject to change. Please refer to the Key Investor Information Document and the fund prospectus for further fund information.

*Net Historic Yield on current portfolio constituents, net of fees as at 46265. Fees taken 50% from income and 50% from capital.

†The ongoing charges figure is based on the last year's expenses (ending 28/02/2026) and may vary from year to year. The transaction fee is paid by the fund due to the acquisition and disposal of investments.

Investment Risks - This fund predominately gains exposure to a combination of income and capital growth assets through investment in other investment funds whose individual risk profile may not match that of the Balanced fund, while exposure to UK markets is generally through direct equity holdings. Global currency fluctuations contribute to fluctuations in the value of the investment. Investment Trusts, Sovereign Bonds and Structured Products do not represent significant holdings but where used carry specific investment risks; with structured products there is a risk of insolvency of the underlying issuer, while Investment Trusts may borrow to invest and, where borrowing is used, the gains or losses in those underlying investments are exaggerated. The value of bonds are affected by relative movements in interest rates. Please refer to the Key Investor Information Document and the fund prospectus for further fund information.

Distribution and Fund Administration

This document is provided to investors for the purpose of information only. It is not for onward distribution to any other type of client. The views, opinions and forecasts are those of the fund manager. This material should not be relied upon as sufficient information to support an investment decision. This material is for information only and does not constitute an offer or solicitation of an order to buy or sell any securities or other financial instruments, or to provide investment advice or services. The dealing price may include a dilution levy where the fund experiences large inflows and outflows of investments. Further details are available in the Prospectus.

Portfolio positions are based on gross asset valuations at global close (not official NAV time). Historic yields distributions declared over the past 12 months.
